1.0 SUMMARY

This report summarizes exploration activity conducted in 2004 on the DeBeers Canada Exploration (DBCEI) property Quoich River. The 222 permits of this property were registered to DeBeers Canada Exploration February 1st, 2004 (Figure 1). First reconnaissance work on the Quoich River Project was performed between June 27th and August 8th, 2004.

The sampling program resulted in collecting 1351 sediment samples within an area of approximately 36,315 square kilometres each of which consisted of a volume of 10l with a grain size inferior of 0.5cm. In order to cover this extensive area with samples and to fulfill the required obligations 5-7 samples were taken on each permit by helicopter supported sampling crews.

Several kimberlite occurrences have been located to the south east of Baker Lake, which initiated a sudden increase in exploration in the eastern arctic. Applications were submitted and on January 31, 2004 numerous prospecting permits were granted.

The Quoich River property is located in the Rae domain of the Churchill Province. The property is predominantly underlain by supracrustal archean granitic, and gneissic rock with rare aphebian intrusions (Patterson and LeCheminant, 1985).

The property is within the Keewatin ice divide and stretches also to the north and east of the ice divide (Utting and McMartin, 2004).The majority of the property is covered by till veneer with localized regions of till blanket to the north, and dispersed areas of outcrop with minor quaternary deposits(Fulton, 1995). Numerous discontinuous eskers run through the property trending southeast on the western boundary and deviating towards the south-southeast on the eastern boundary.

All exploration activities were helicopter and fixed-wing supported from Baker Lake or from three temporary fly camp locations.

The few positive indicator mineral results of the 2004 sampling suggest that undiscovered sources of indicator minerals may exist within the south-eastern part of the Quoich River property. Landholdings should be reduced and follow-up sampling conducted.

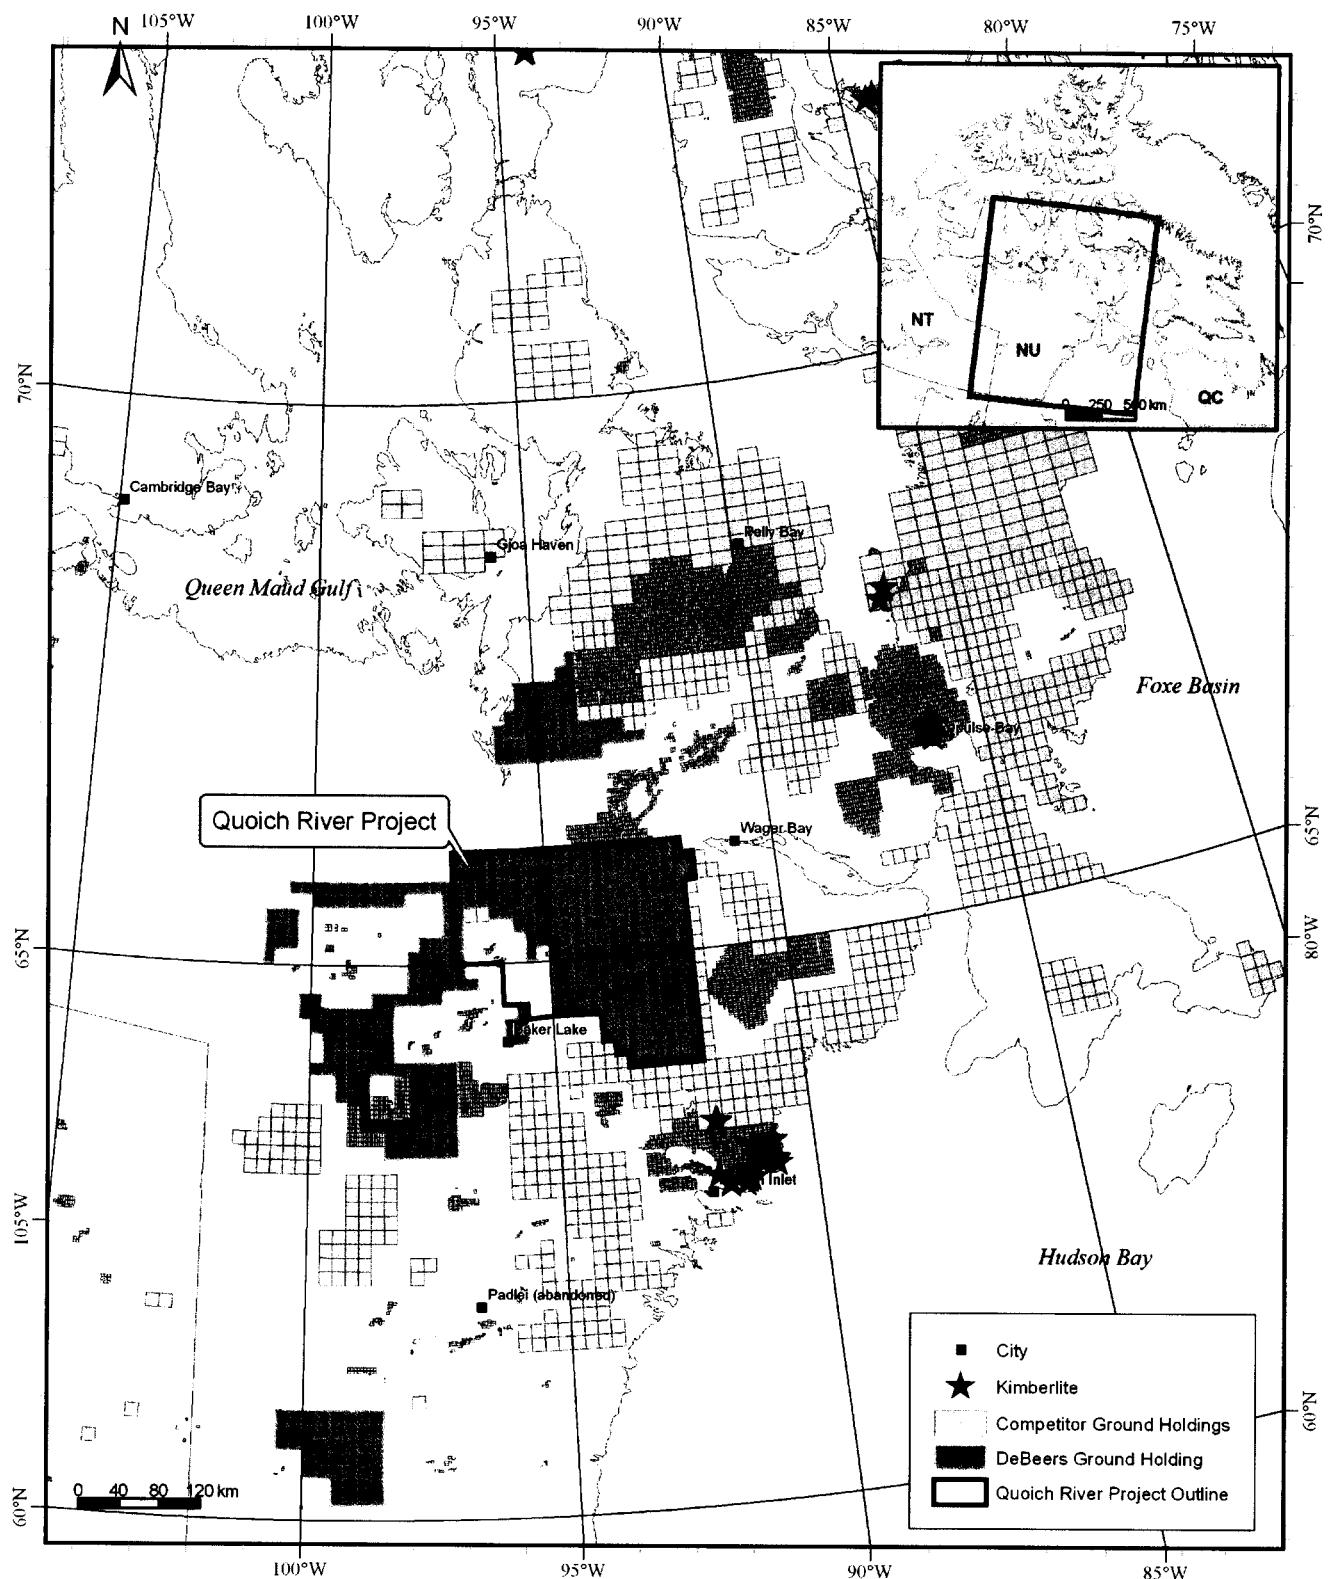

Figure 1 – General Permit Location

2.0 PROPERTY DESCRIPTION AND LOCATION

The 222 Quoich River contiguous prospecting permits (Figure 2 & 3) are situated in the Kivalliq Region, approximately 75km East and North of Baker Lake with the main area situated between Baker Lake and Wager Bay covering an area of 8,851,285 acres. The area is bound by the co-ordinates 66°N – 97°W and 64°N – 91.75°W. The permits are located on NTS map sheets 066H02, 066H07, 66H09, 066H10, 066H15, 066H16, 056E01-03, 056E05-16, 056F01-16, 056G12, 056G13, 056C01-16, 056D09, 056D10, 056D15, 056D16. All prospecting permits (Appendix 1) that comprise the Quoich River project are 100% registered to De Beers Canada Exploration Inc. Prospecting permit applications were submitted to the Nunavut Mining Recorder on December 1, 2003 and granted permits became active on January 31, 2004. Quoich River prospecting permits are valid for a three year period, if sufficient yearly payments are received or assessment report credit is approved before the anniversary date. At any time claims may be staked within the prospecting permit by the holder, or a decision made to allow them to lapse.

To retain the Quoich River prospecting permits work or a bond must be submitted at the rate of \$0.10 per acre for year one, \$0.20 per acre for year two, and \$0.40 per acre for year three. At the end of the permit period claims are staked or the permits relinquished.

The Author has no knowledge of any significant mineralized bodies discovered to date on the Properties nor is the Author aware of any environmental liabilities to which the property is subject.

Indian and Northern Affairs Canada (INAC), the Nunavut Water Board (NWT) and the Nunavut Impact Review Board (NIRB) administer land use in the region. De Beers Canada Exploration Inc. acquired all permits necessary to carry out the ground exploration programs.

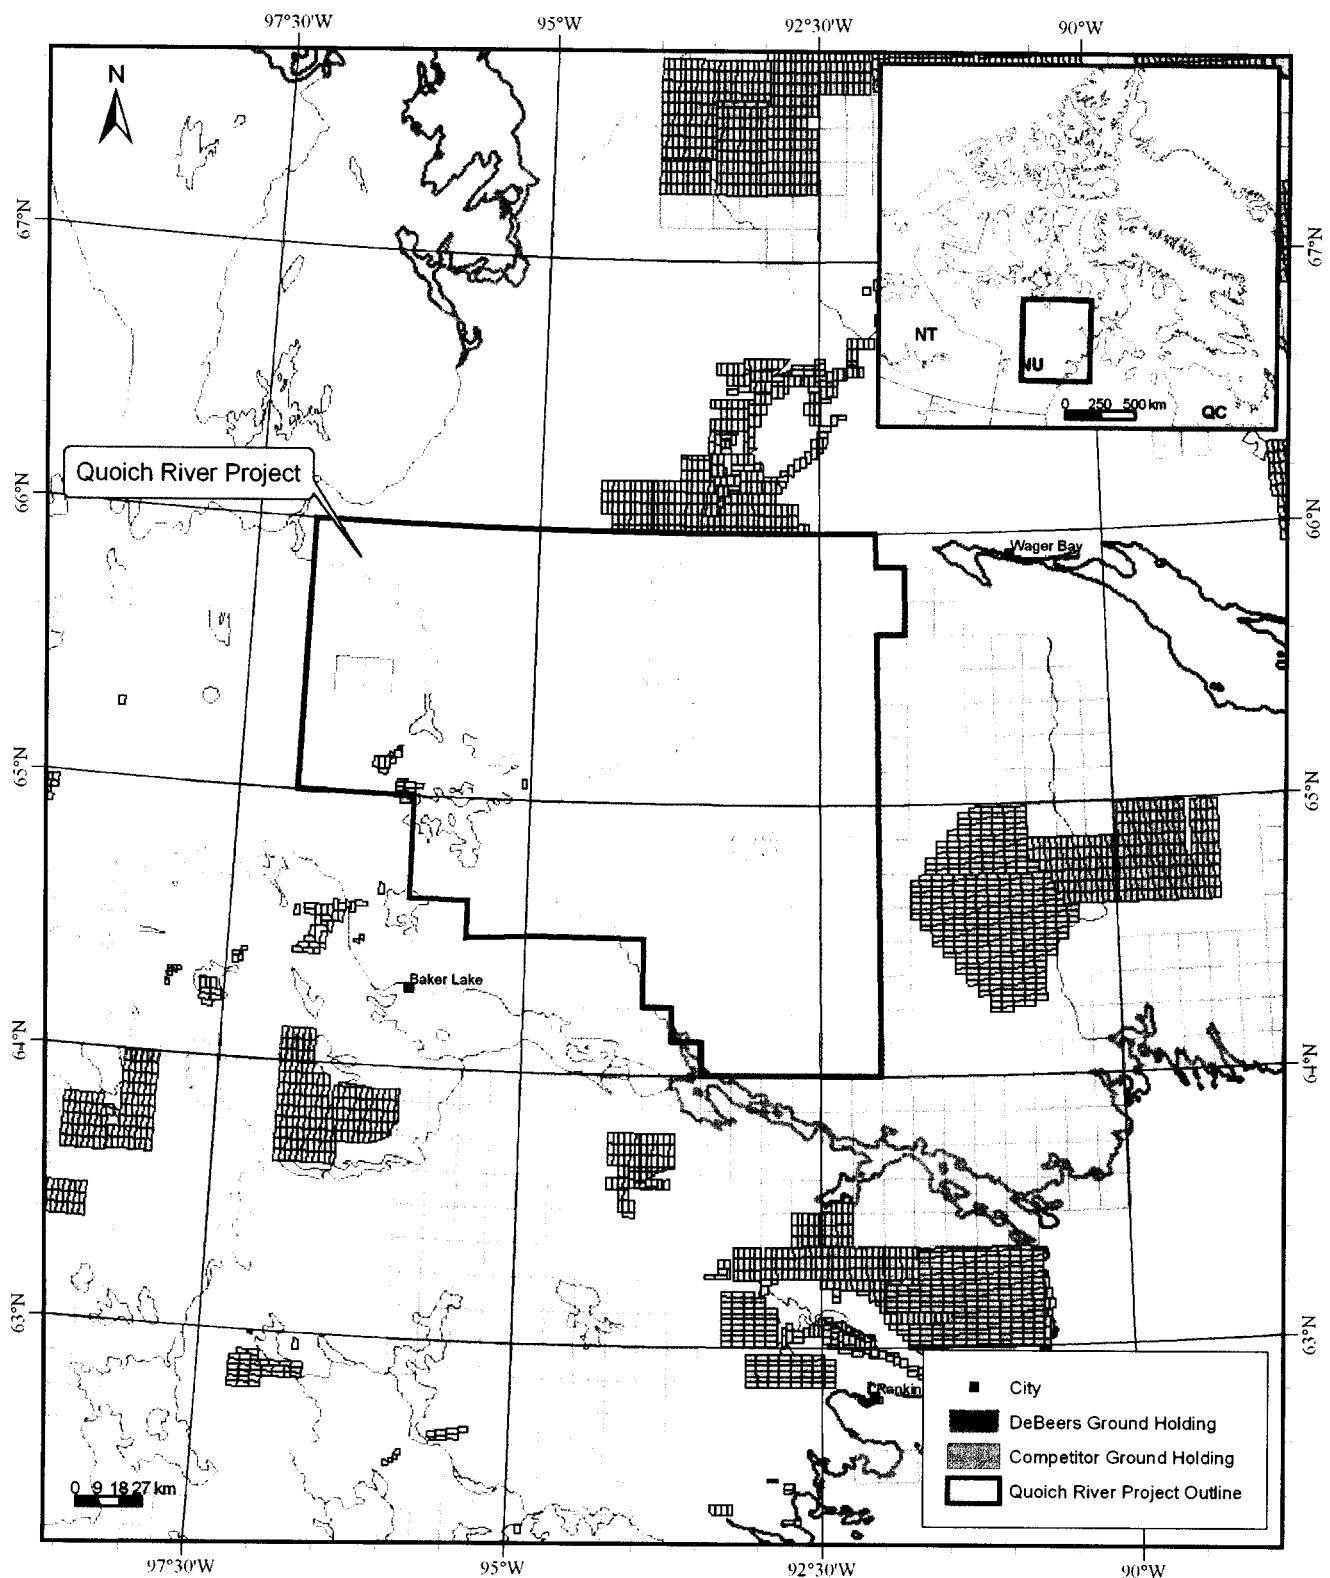

Figure 2 – Regional Permit Location

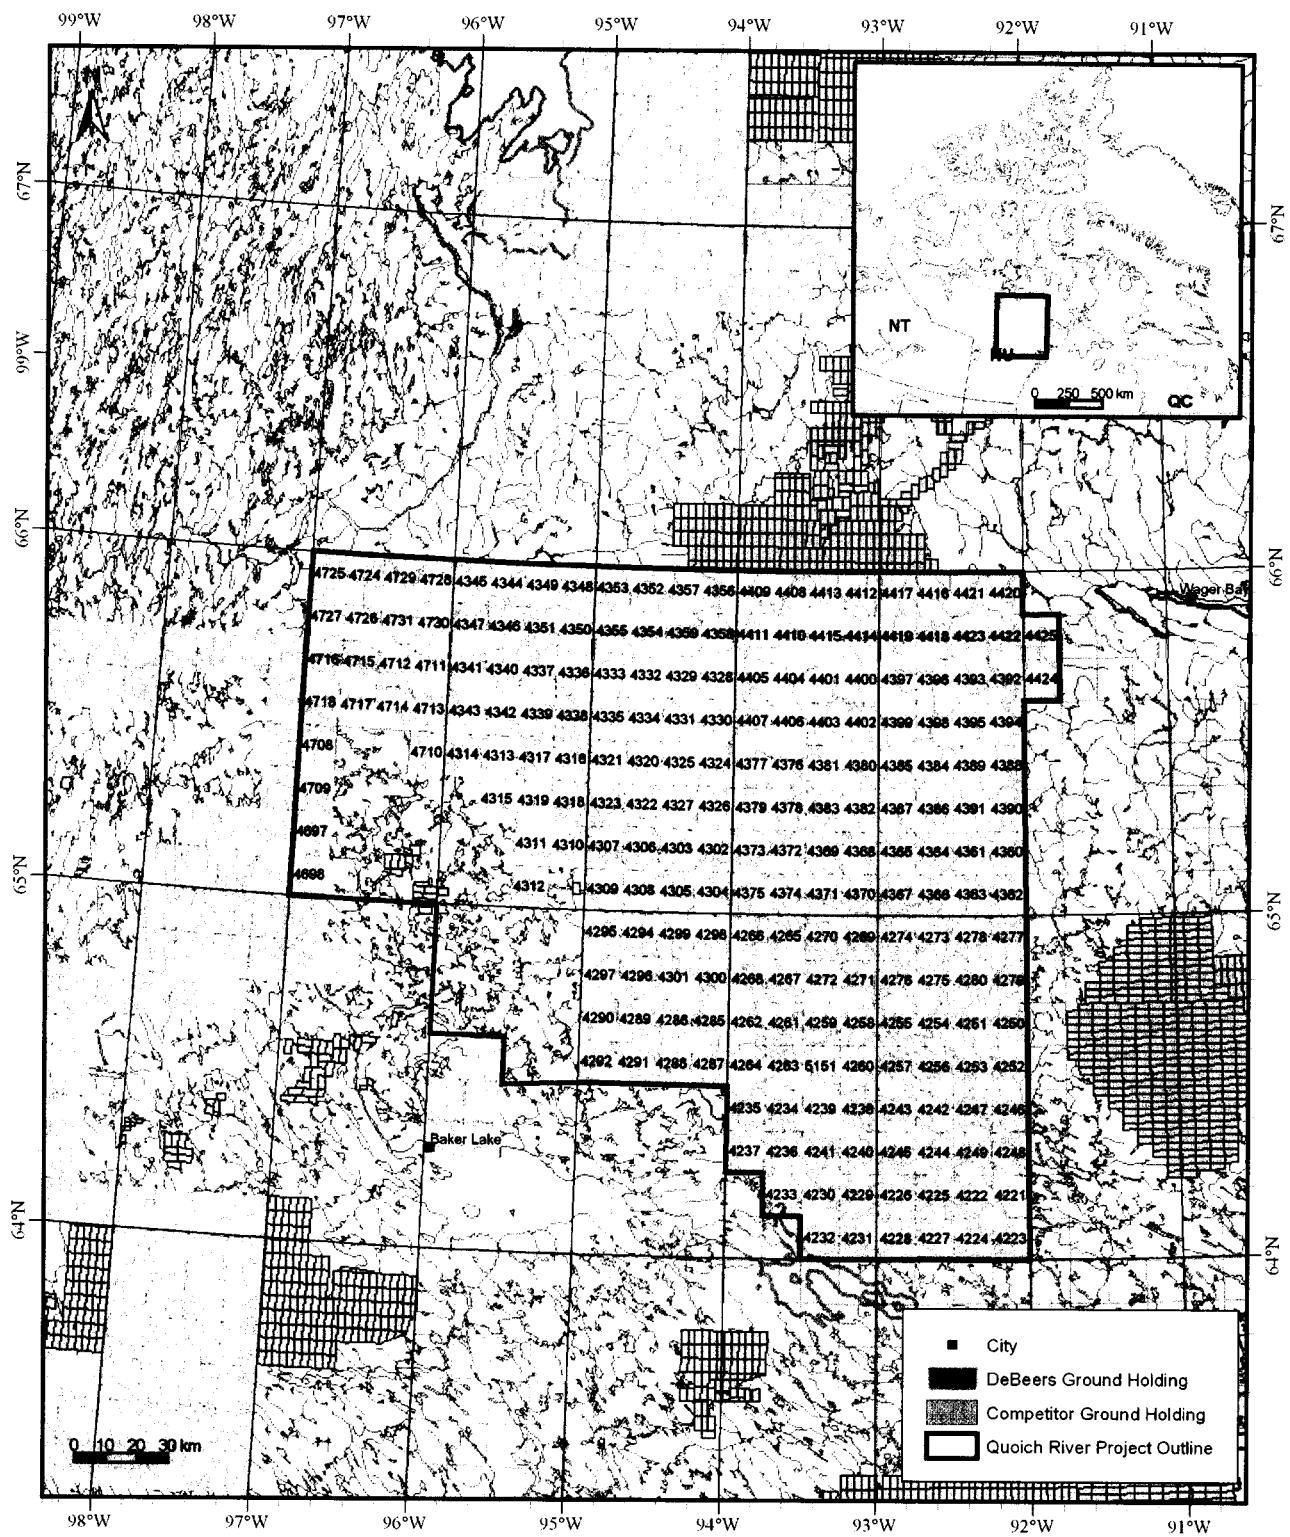

Figure 3 – Property Permit Location

3.0 ACCESSIBILITY, CLIMATE, LOCAL RESOURCES, INFRASTRUCTURE AND PHYSIOGRAPHY

The treeless landscape in the Quoich River area varies in elevation from 20 to 500 metres amsl. The local relief within the Quoich River block varies greatly due to near ocean altitude in the southern portion of the property. The topography is characterized by shallow lakes, creeks, rivers and swamps throughout. Till veneers occur throughout the property with dispersed areas of rock outcrop. The area is situated within the zone of continuous permafrost centered some 160 kilometres northeast of Baker Lake. Climate is classified as Polar. Winter temperatures vary from minus 20 to minus 35°C, and summer temperatures from minus 5 to 15°C. Lakes typically have ice until July and freeze in late September. Precipitation is a moderate 270mm per year.

Lichens, moss, grasses, and shrubs are typical vegetation, and wildlife observed included muskox, caribou, wolf, fox, and grizzly bear.

For mobilizing crews from and to Yellowknife, NT, a Dash 7 was chartered. An amphibious caravan aircraft was chartered to gain access to the terrain in order to mobilize crew and camp, supply food, fuel and backhaul samples. The aircraft was stationed in Baker Lake for the duration of the program. Expediting services were used in Baker Lake, NU and in Yellowknife, NT. All work from the camps was completed by helicopter (Hughes 500 and Jet Ranger B-206). Temporary fly camps were utilized and relocated prior to being occupied for 100 person-days.

4.0 GEOLOGICAL SETTING

4.1 Bedrock Geology

The Quoich River permit block is within the Western Churchill Province, Rae subprovince and bordering the Hearne subprovince, separated by the Snowbird tectonic zone (STZ)(Figure 3). This major geophysical feature has been interpreted both as a Paleoproterozoic suture and an intercontinental accommodation fault (Pehrsson et al. 2000). The Rae domain is assumed to be underlain by a more evolved continental crust, whereas the Hearne is shown to be composed of a late Archean juvenile oceanic crust (Hanmer and Relf, 2000). The late archean supracrustal belts on both sides of the Rae-Hearne boundary were deposited within a relatively narrow time window, ~2.72-2.68 Ga (Hanmer and Relf, 2000). In the interval 2.0-1.8 Ga, the northwestern Canadian Shield underwent tectonic activity related to the collision and indentation of the

Figure 4 – Regional Bedrock Geology

Aspler, L. B., and Chiarenzelli, J. R., 1998. Two Neoarchean supercontinents? evidence from the Paleoproterozoic. *Sedimentary Geology*, 120, 75-104.

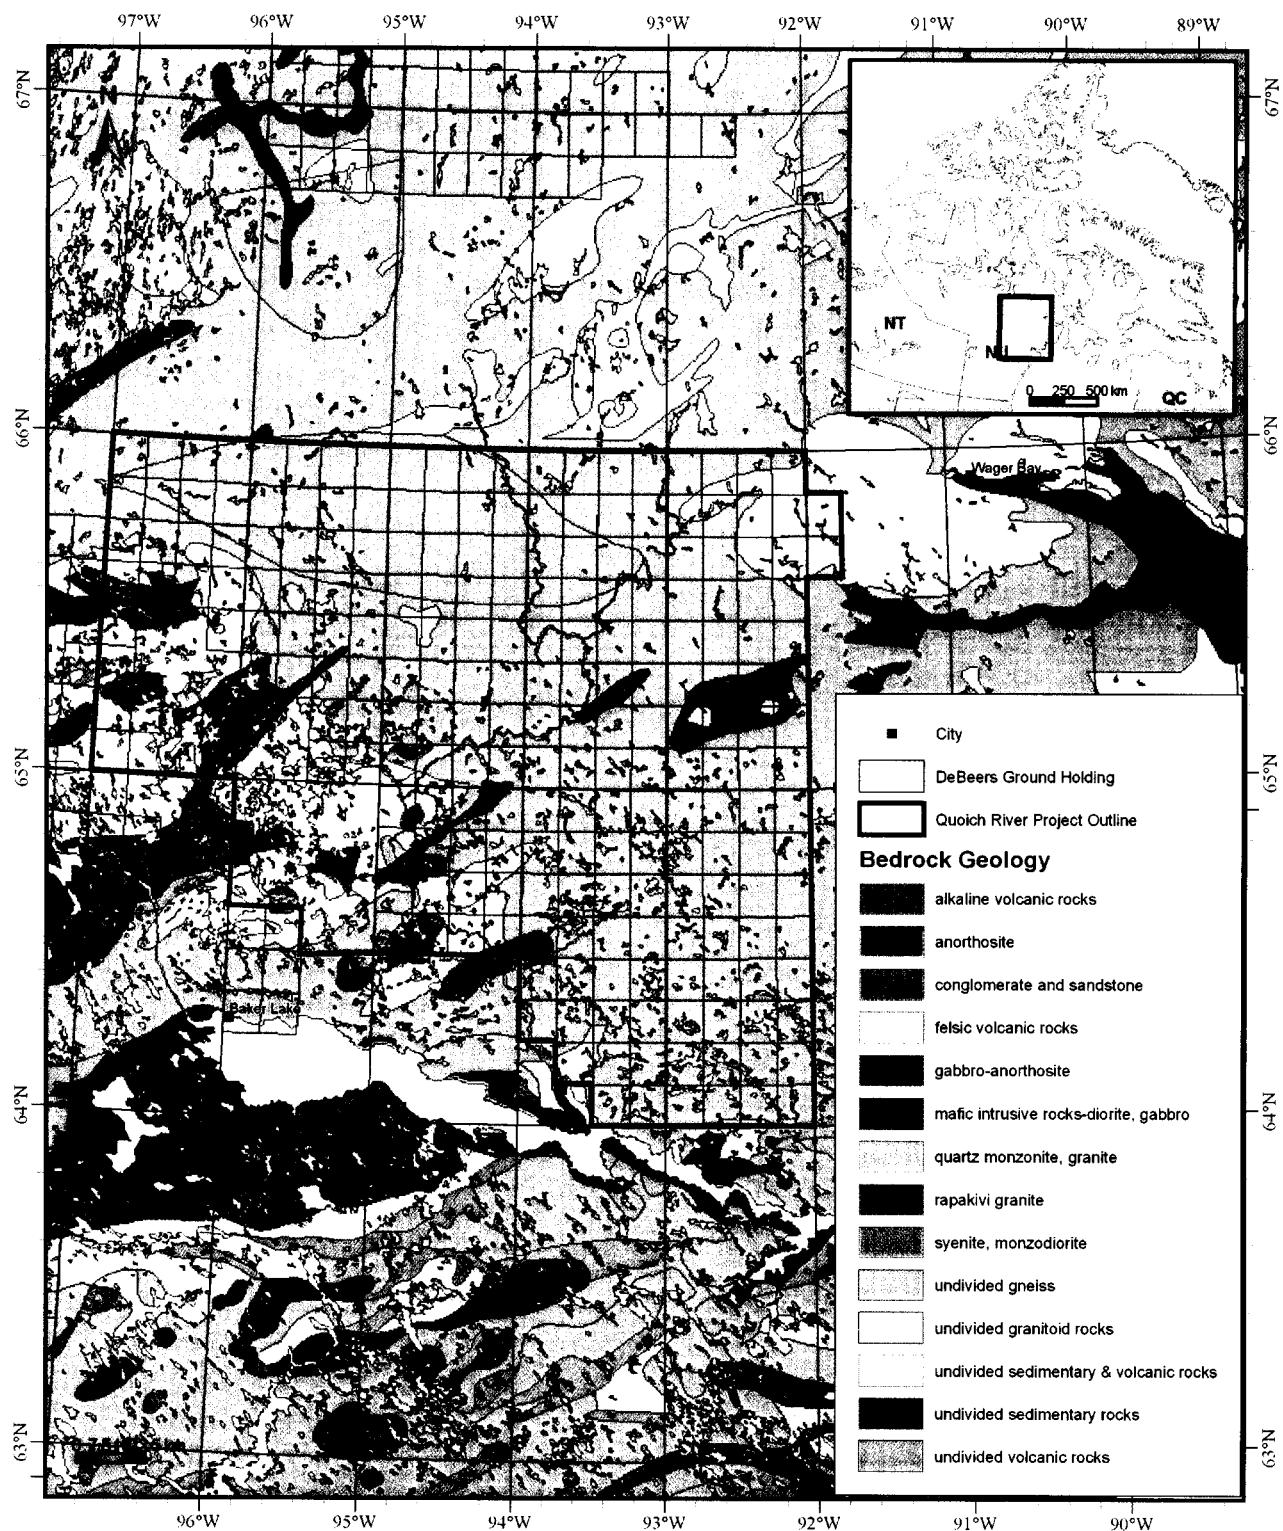

Figure 5 – Property Bedrock Geology
 Geology after: Wheeler, J.O., et al. 1996. Geological Map of Canada, Geological Survey of Canada, Map D1860A, scale 1:1 000 000.

western Rae Province by the Archean Slave Province (Ross and Eaton, 1999). In the District of Keewatin, including both the Hearne and Rae provinces, lamprophyre dykes and associated felsic volcanic and intrusive rocks dated at 1850+30/-10 Ma also have been suggested as a magmatic response to continental indentation (Ross and Eaton, 1999).

The property is predominantly underlain by undifferentiated archean granitic, and gneissic rock with rare aphebian intrusions that are locally metamorphosed (Patterson and LeCheminant, 1985).

A large isolated belt of Archean supracrustal rocks is present within amphibolite gneiss to the west of the Wagner Bay shear zone on the eastern boundary of the permits (Patterson and LeCheminant, 1985). The southwestern portion of the property, north of the Baker Lake shear zone contains numerous isolated aphebian batholiths. These aphebian intrusions are described (Patterson and LeCheminant, 1985) as biotite and biotite-hornblende granite and granodiorite.

The Baker Lake Shear Zone cuts through the southwestern part of the property in an east-west direction, with numerous associated faults.

4.2 Surficial Geology

The Keewatin Ice Divide, which represents the highest area on the western part of the Laurentide Ice Sheet, stretches from near the Manitoba-Nunavut border to the vicinity of Wager Bay - a distance of about 700 km where ice flowed away from the approximate center of the divide ($64^{\circ}45'N$, $95^{\circ}30'W$) in all directions and glacial landforms are arranged in roughly concentric zones around it (Figure 6).

The property is located within, north north west as well as south-east of the Keewatin Ice Divide. The property has been mapped at a reconnaissance scale (1:1 000 000, Aylsworth and Silts, 1989) showing undifferentiated surficial materials, which consist mainly of till veneer but can also comprise organic, lacustrine, fluvial or glaciofluvial deposits (Figure 7). In some areas the number of bedrock outcrops is fairly high. Several esker systems traverse the area trending dominantly south-southeast and occasionally southeast in the northwestern portion of the property (1:5,000,000, Fulton, 1995). Crag and tail structures have been mapped which indicate an ice flow that was generally southeasterly in the south and trending northerly in the northern portion of the property (1:1,000,000, Aylsworth and Silts, 1989).

5.0 EXPLORATION

Approximately six till samples were taken per permit to regionally assess the property for kimberlites and satisfy assessment credit requirements. Sediment samples were collected and sent to the DBCEI prospecting sample treatment facility in Sudbury for kimberlite indicator mineral processing. The concentrates were forwarded to South Africa for mineral identification.

6.0 SAMPLING METHOD AND APPROACH

Fieldwork was based out of Baker Lake and out of three temporary camp sites. A total of 1351 ten-litres samples that were field screened to <0.5cm was collected. Two sampling crews consisting of one geologist and one assistant were each supported by a helicopter. Great Slave Helicopters provided the helicopters (Hughes 500 or Jet Ranger). In order to achieve regional cover, stream samples and esker samples were collected preferentially, followed by beach (modern and raised) and some till samples. Samples sites were selected according to the best regional sample material. Detailed sample descriptions were recorded and the location was determined using a Garmin 12XL GPS receiver (Appendix 1). During this reconnaissance sampling, the sample spacing was about one sample per 25km².

The samples were flown out of camp to Baker Lake by Caravan aircraft where they were palletized and sent by barge or by Convair to Churchill, MT. The samples were trucked from Churchill, MT to the DBCEI processing facility in Sudbury, ON.

7.0 SAMPLE PREPARATION ANALYSIS AND SECURITY

At the DBCEI prospecting sample treatment facility in Sudbury, the samples are first disaggregated and deslimed in modified cement mixers to remove the clay size fraction (Figure 6). The washed material is then screened to remove the oversize fraction (ie +1.0mm) and the ultrafine or undersized fraction (ie -0.3mm). The -1.0+0.3mm size fraction is treated through a mini-dense media separation (DMS) plant to produce an initial heavy mineral concentrate. The magnetic minerals are removed from the concentrate. The non-magnetic concentrate is split into -1.0+0.5mm and -0.5+0.3mm and both size fractions are LST separated for heavy minerals. Concentrate separations in LST heavy liquid occur at about the same speed as when using TBE, but without the occupational

hygiene risk of organohalides. The weights of the various fractions are recorded for the different stages of sample processing. This information can be used to define the textural characteristics of till in a particular area. On average, less than 1% by weight of the original sample is analyzed for kimberlitic indicator minerals (Figure 8).

Finally the dried heavy mineral concentrates were sent to the De Beers' mineralogical unit (DCMU) in Kimberly, South Africa for kimberlitic mineral examination and classification aided by a Leica MZ6 binocular microscope (Figure 9).

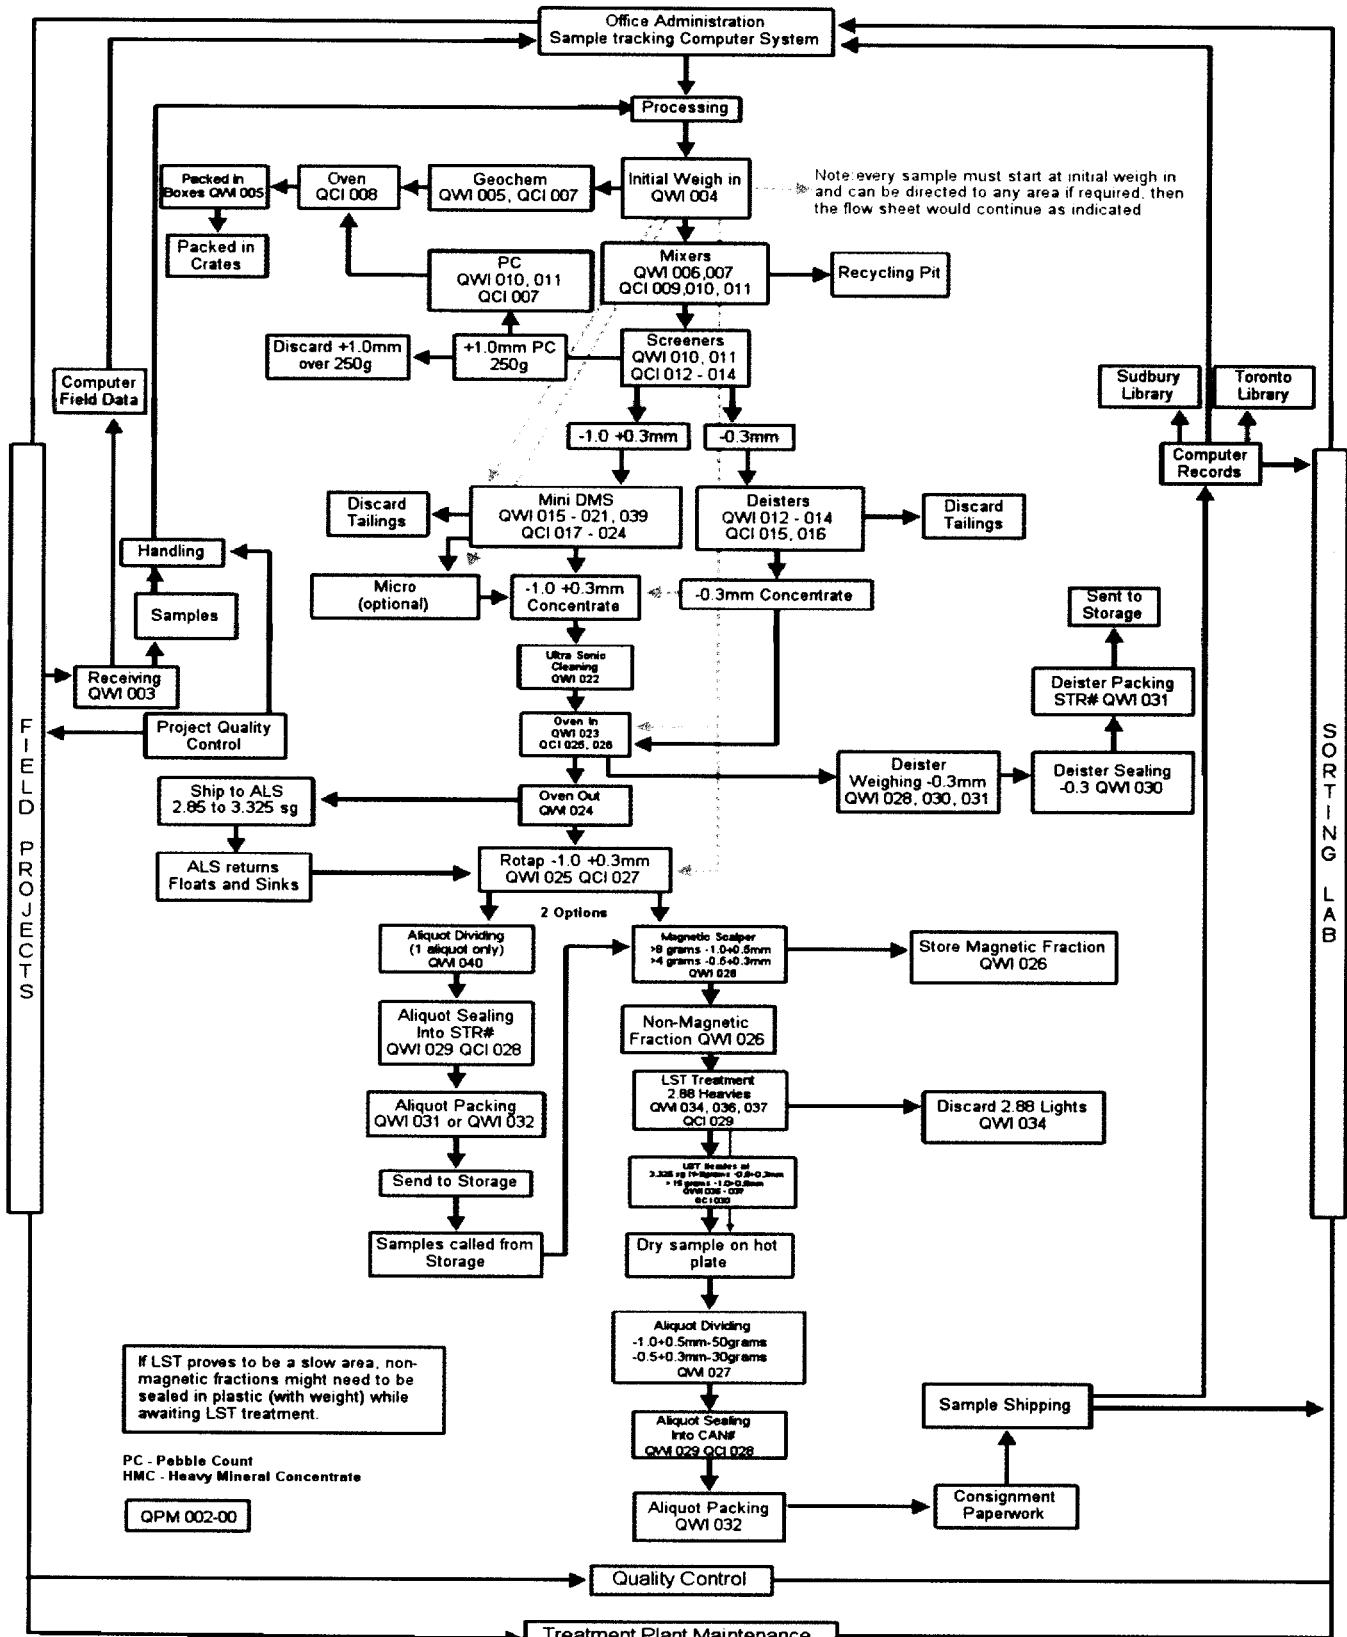

Figure 8 - Sample Treatment Plant Process

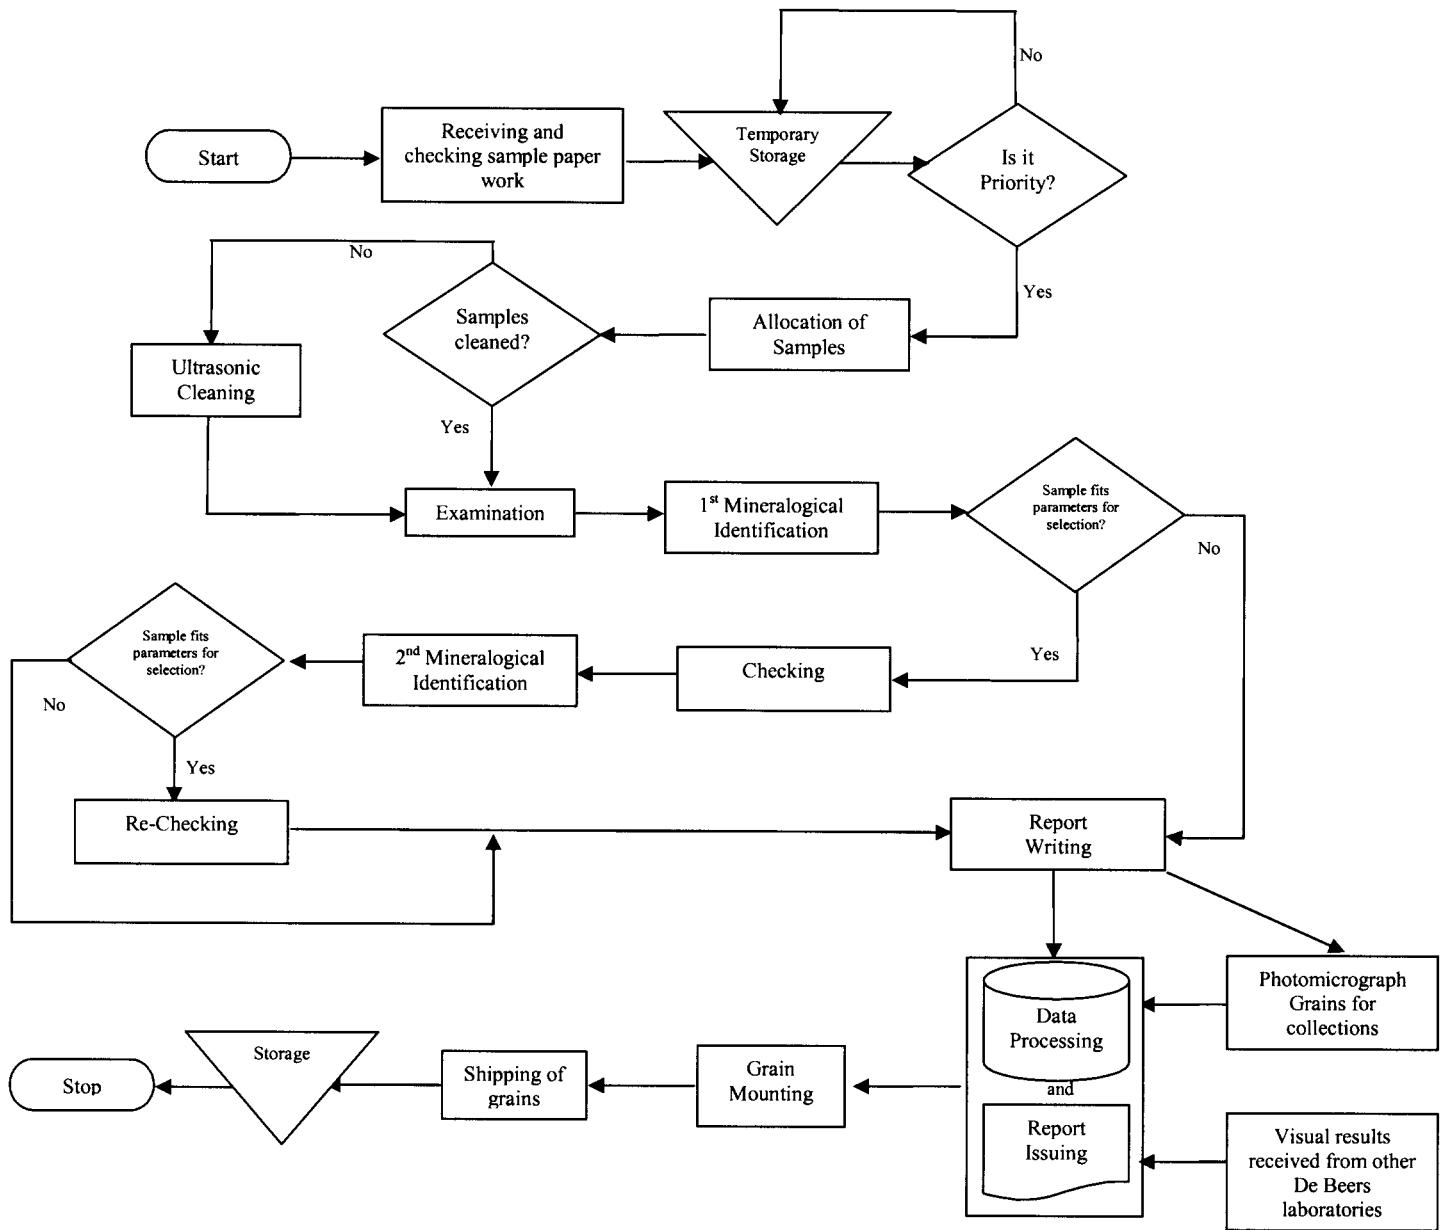

Figure 9 - Kimberlitic Mineral Analysis (KMA) Process

8.0 DATA VERIFICATION

DBCEI has established an extensive Quality Control/Quality Assessment (QA/QC) programme implemented to provide analytical and evaluation services essential to discovering economic diamond deposits. This Quality Management System (QMS) has been designed to comply with the International Standard ISO 9001:2000 Quality Control System. The QMS has been established to provide an effective and economical system for assuring product quality throughout all phases of processing. The QMS implemented by DBCEI continues to undergo frequent reviews in the quest to improve effectiveness of the processing procedure. Quality objectives are established annually and reviewed quarterly by the Quality Management Team. The Management Team ensures that quality objectives are measurable and consistent with quality policy standards. The QMS manual consists of process maps and flow charts indicating an overall sequence flowchart and a Treatment Plant sample processing Flow Chart.

Given the extensive QA/QC DBCEI programme in place the Author does not feel it is necessary to question the reliability of the results obtained from the samples collected. The Author has participated in taking field samples by DBCEI in the field and has viewed the sample bags in storage at Baker Lake. However the author was not physically able to be present at all the collection sites and relies upon the QA/QC field procedures emplaced by DBCEI and followed by their field personnel.

9.0 INTERPRETATION AND CONCLUSIONS

A total of 184 kimberlitic indicators were reported in the 1374 samples that were collected within the Quoich River permits in 2004 (Appendix 3). All positive grains were found in the fine fraction (ie $-0.5+0.3\text{mm}$) because only this size fraction is examined for reconnaissance samples. A total of 414 grains was recovered being 1 garnet, 3 ilmenites, 4 clinopyroxenes, a total of 176 spinels (including 1 kimberlitic spinel) and 238 other possible indicator grains. Spinel is an abundant mineral (1-20 grains per sample). A single garnet was recovered in a beach sample (AG627604). In another beach sample (AG908704) a single kimberlitic spinel was identified. Few ilmenite and clinopyroxene grains were recovered.

The results obtained suggest that there is a low but existing potential in finding a kimberlite pipe in the area, however it is not discarded that ultramafic rocks can be a possible source for the garnet and the Cr-spinel population.

10.0 RECOMMENDATIONS

The results of the 2004 sampling suggest that undiscovered sources of indicator minerals may exist within the south-eastern part of the Quoich River property. Landholdings should be reduced. Follow-up sampling should be undertaken to better resolve and/or confirm the presence of the visually identified garnet, as well as the presence of the possibly kimberlitic spinel.

Also an airborne geophysical survey should be considered to identify any obvious kimberlite-like anomalies.

Furthermore, grains should be submitted to microprobe in order to identify the mineral chemistry of the grains.

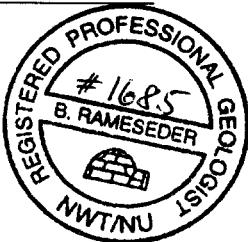

11.0 CERTIFICATE OF AUTHOR

I, Birgit Rameseder, M.Sc., resident of the city of Yellowknife in the Northwest Territories, do hereby certify that:

1. I am currently employed as Project Manager for:
De Beers Canada Inc.
601-4920 52nd Street
Yellownife, NT X1A 1R6
2. I completed a French Masters in Geology (equivalent to Bachelor) in 1998 from the University of Caen, France and a Master of Science (M.Sc.) in 2001 from the University of Quebec in Montreal.
3. I am a member in good standing of the Association of Professional Engineers, Geologists and Geophysicists of the Northwest Territories.
4. I have been involved in geological exploration since 2001 with De Beers Canada Exploration Inc. and SouthernEra Resources Ltd in the Northwest Territories, Nunavut and Saskatchewan.
5. I am responsible for the review of data and preparation of sections 9 and 10, entitled: "A REPORT ON THE 2004 SEDIMENT SAMPLING PROGRAMME ON THE QUOICH RIVER PROPERTY, NUNAVUT. I have visited the property from June 29th to August 8th, 2004.
6. I have had prior involvement with the property that is the subject of the report in supervising and participating in the 2004 sampling program.
7. I am not aware of any material fact or material change with respect to the subject matter of the report that is not reflected in the report, the omission to disclose which makes report misleading.
9. I am not independent of the report issuer.

ROK - Garnets exhibiting remnant of Kelyphite

PM - Ilmenites exhibiting Perovskite mantle

ROS - CPX exhibitng a "remnant of surface texture"

APPENDIX 4

Project Expenditures

Assessment Expenditure Calculation

De Beers Canada Exploration Inc.

Project: Quioch River Property

Sediment sampling Programme - 2004

Prospecting Permits 4221-4280, 4285-4292, 4294-4425, 4697, 4698, 4708-4718, 4724-4731, 5151

Summer 2004**Camp costs - summer 2004 (including transportation, fuel, food)**

	Amount	Subtotals
Field Wages		
De Beers Staff - Chargeout rate:		
1 Project Geologist @ \$430/day x 36 days	<u>\$15,480.00</u>	
Contract- Chargeout Rate		\$15,480.00
1 Cook @ \$300/day x 5 manday	\$1,500.00	
4 Contract Geologists (\$16-19/hr) / 1 Contract Cook (\$18/hr) (227 days)	\$54,131.79	
81.5 Man days @ \$250/day (Peters Expediting)	<u>\$20,375.00</u>	
		\$76,006.79
Camp Costs (room, board, supplies)		
Groceries and supplies @ \$14106.37	\$14,106.37	
Fuel for generator and propane	<u>\$491.81</u>	
		\$14,598.18
Health & Safety Supplies		
Camp First-Aid Kit	<u>\$535.87</u>	
		\$535.87
Fixed Wing - Contract		
Fixed wing contact 115.29hrs @ \$965.60/hr	\$111,323.29	
Fixed wing contract bulk fuel	\$36,553.81	
Fixed wing mobilization/demobilization	<u>\$3,180.00</u>	
		\$151,057.10
Fixed Wing		
Fixed wing charters	\$144,004.37	
Fixed wing charter fuel	<u>\$47,925.77</u>	
		\$191,930.14
Expediting		
Peters Expediting/G&G Expediting	<u>\$32,042.17</u>	
		\$32,042.17
Freight		
Fuel ground shipping & handling	<u>\$10,830.35</u>	
		\$10,830.35
Repairs		
Field equipment repairs	<u>\$225.00</u>	
		\$225.00
Camp Communications/Computing		
Satellite phone call charges (Infosat and Globalstar)	\$6,021.98	
Satellite phone rental (World of Wireless & Northern Communications)	\$2,422.00	
Depreciation of 2 Laptops Computer and printer @ \$2000/set x 30%	\$1,200.00	
Rental of 5 handheld radios (Northern Communications)	\$1,698.13	
Depreciation of digital camera @ \$499 x 30%	<u>\$149.70</u>	
		\$11,491.81
Other supply costs		
Weatherhaven tents and accessories	\$13,559.16	
Generator & water Pump (Polar Tech)	\$2,044.32	
Mountain Equipment Co-op Tents	\$3,801.66	
Propane furnace/water heater/freezer/range	<u>\$2,725.16</u>	
		\$22,130.30

Summer 2004 - Sampling costs

		Amount	Subtotals
Hotel/Food			
Yellowknife Accomodations	\$7289.92 x 0.5	\$3,644.96	
Yellowknife Food	\$48.95 x 0.5	\$24.48	
Baker Lake Accomodations		\$6,882.50	
Baker Lake Food		\$408.51	
Baker Lake Accomodations (Air Tindi)		<u>\$4,918.83</u>	
			\$15,879.28
Airfares to and from Yellowknife			
\$3997.66 x 0.5 (De Beers)		\$1,998.83	
\$1695.11 x 0.5 (Great Slave Helicopters)		<u>\$847.56</u>	
			\$2,846.39
Helicopter costs			
Rental of Hughes 500D @ \$757/hr		\$456,243.90	
Fuel for Hughes 500D		<u>\$97,791.75</u>	
			\$554,035.65
Supplies			
Computer Supplies		\$1,140.72	
Sampling Supplies		\$631.58	
Field/Camp Supplies		<u>\$9,326.56</u>	
			\$11,098.86
Airfreight			
Document & supplies shipping to Baker Lake		<u>\$1,853.35</u>	
			\$1,853.35
Vehicle			
Baker Lake Vehicle Rentals & Leases		<u>\$1,847.98</u>	
			\$1,847.98
Sample transport costs			
Sample transport from Baker Lake to Sudbury (by barge, convair and trucking)		\$12,814.61	
Transport of sample concentrates from Sudbury to South Africa		\$548.25	
			\$13,362.86
Sample processing costs			
Sudbury DMS processing of 1520 samples @ \$87.00/sample		<u>\$132,240.00</u>	
			\$132,240.00
Indicator Picking			
Laboratory costs for indicator picking @ \$85.94/hour x 3365.7 hours		<u>\$289,248.26</u>	
			\$289,248.26
Total costs for sampling programme			\$1,548,740.33

Field office related expenditures 2004

	Amount	Subtotals
De Beers Staff - Chargeout rate:		
1 Project Geologist @ \$430/day x 32.5 days	\$13,975.00	
1 Drafts Person @ \$290/day x 15 days	\$4,350.00	
1 Project Administrator (Report Writing) @ \$430/day x 8 days	\$3,440.00	
1 In-house expeditor @ \$290/day x 6 days	<u>\$1,740.00</u>	
Postage/Courier		\$23,505.00
